# Pulse INP

Comprehensive End-to-End Revenue Assurance

### REAL-TIME INTELLIGENT ROUTING FROM AN INDUSTRY PIONEER

SAVE on local and LO costs

ROUTE based on best value

PEER with pastners

Hoteot

ENABLE policy-based routing ADDRESS number portability

NECOTIATE with suppliers ENSURE quality of routes RECONCILE billing records EMPOWER decision making

The Public Intelligent Network Plantorm (INP) offers advanced analytics into supplier discribe, margin, and profita bility it enables real-time margin assurance by certralizing and automating posting policies and network control. Public addresses unique requirements of the Interconnect team to registing better rates, increase the number of suppliers, lower costs, and improve operating rangem. For the Network Operations team, Dube INP can deliver the ability to translate several hundred rate decis from one or more suppliers, in disparate formats, into real-time switch routing actions. It also prevents necessary as a providing the ability to apply routing policies in real-time, bypansing or over riding routes or diversing suspected incomingstraffic for specialized handling. Public empowers legicles him rates with valuable network insight to make informed and timely decisions.

### Modular, flexible, real-time solution

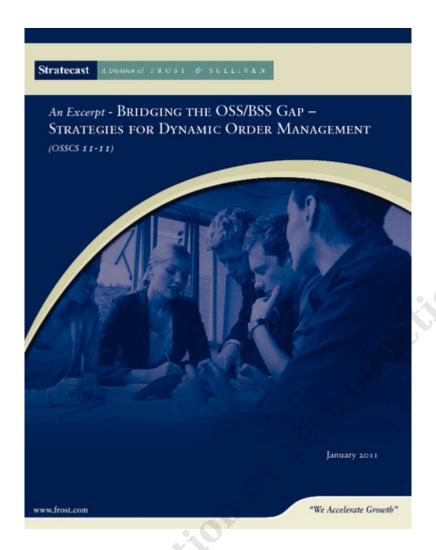

Pulse han industry pioneer in mal-time, intelligent least cost routing solutions, Pulse is flexible, modular, and can be scaled to meet the growing needs of your organization Start with basic least Cost Routingand add new modules as your needs grow.

### CSP ENTERPRISE PRODUCT MANAGEMENT:

THE SOLUTION TO ORGANIZING THE FACTORY AND THE STORE

### A model for getting organized

In running a retail store, there are some basic principles that everyone understands about products and inventory. For a start, the Sales staff rely on knowing exactly what they have to sell - what is in stock, what options are available and to whom, what the lead times are for special orders, etc.

Purchasing needs the same information to know when to source additional stock to match customer demands and to find suppliers that can deliver.

And Marketing and Product Management need to know which products are doing well, which ones need refreshing or retiring and where to focus their next product campaigns and development ideas.

The common thread across these departments is the need to service the customer with the right products.

To that end, the idea of product is at the center of the retail universe. The retail business is all about procuring, marketing and stilling products, with business success dearly linked to product success. Retail aucross is the retire heavily dependent on factory supply—the product design, build, warehousing, and distribution states associated with making the products the resilier wants to sell.

Communication Service Providers (CSPs) certainly share the same challenges of the physical product resaller, especially when it comes to determining and thes supplying the products that customers will find attractive and want to buy.

There a few important differences for a CSF, given the fact that CSF products are mainly service offerings that they other supply themselves. Services are not lined up in boxes on shelves. Services are not shipped from distant factories whenever stock are not shipped from distant factories whenever stock are not shipped from distant factories. They must be designed, manufactured and packaged.

The underlying service delivery capability must be in place before the services can be delivered, just as the factory for the resider's product must be operational before a retailer can expect to have the products to sell. And the any other products, services are subject to supply limitations—their delivery is contrained by retwine the eight products, services are subject to supply limitations—their delivery is contrained by retwine the delivery and support of these services.

With this chail role as Wholessiler and Recaller, CSRs have all the same requirements as an autoencoine company for the manufacturing, reasuragement and supply off products, on a day-to-day basis as the orders flow in hors the customers and on a longer term basis as products are created, delivered, and eventually retired. But while every one in most any CSP company understands the primary importance of products, too many CSRs continue to relating the product account in the service of products, too many CSRs continue to relating the product account in the service of products, too many CSRs continue to relating the product account in a fragmented grid unfocusited way. They simply do not have either the day-to-day or long term visibility of their products that is essential for professible performance.

ONTOLOGY

Real-Time Solutions for Mobile Service Providers

## Mobile Video Policy Control

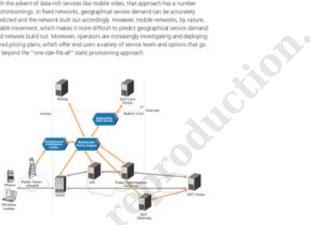

### Benefits at a glance

- Generate new revenue with mobile video services
- to spedific customer segments
- Align revenue and network costs using dynamic policy controls

There is no guestion that video is both popular and consumes more network resources than almost any other application. A look at current data points tells the story. You'llube has become the second largest search engine. Mobile video is predicted to grow 65 fold from 2009 to 2014 and consume of percent of all mobile bandwidth by 2014. Clearly, finding ways to mitigate the impact of mobile video on the network in a way that still meets consumers' demands is critical to the success of mobile operators.

Challenges
Previous network solutions for handling data services primarily centered on static
service provisioning in which operators take a "one-size-fit-all" approach, mowerer,
with the advert of data-rich services (six nobile sides, that approach has a number with the advent of data-ends services like models select, that approach has a number of shortcomings, in fised networks, geographical service demand can be accurately predicted and the networks, by nature, enable movement, which makes it more difficult to predict geographical service demand and network build out. Moreover, operators are increasingly investigating and deploying tiered pricing plans, which offer end users a variety of service levels and options that go far beyond the "one-size-fist-all" static provisioning approach.

Mobile Video Architecture

# THE EMC SOLUTION FOR SERVICE ASSURANCE

Transform Healthcare IT with an application-first approach to IT management

### ESSENTIALS

- physical and virtual IT environments figuration Hanagement
- Coverage across networks, storage, and servers

Advanced root-cause analysis for separating symptoms

### THE FOCUS OF IT OPERATIONS

### ENSURING HEALTHCARE SERVICES AND APPLICATION PERFORMANCE

As a CIO or IT leader of a Healthcare company, you have a to ofold charge:

- . Ensure applications and IT services are delivered consistently and at the highest
- Ensure applications and IT services are delivered convolved and at the highest
  possible investment begins that's what the business and end us as care most about.
   Fully understand and effectively manage your IT service delivery environment, so
  that service levels to the business can be met or exceeded, ongoing operational
  cods are minimized, and problems—when they occur—can be resolved rapidly
  with minimal impact.

### CHALLENGES TO TRANSFORMING IT

Moving applications to the cloud makes service assurance anything but easy. Factors such as the dynamic nature of a virtual data center (VDC), the rapid pace of IT change, lack of operational visibility and insight, and ineffective problem management make providing service assurance more of a long-term goal than short-term reality for many IT leaders. They need answers to critical management questions, including:

- How can I ensure applications and IT services are delivered consistently and at the highest possible levels?
- How do I understand risk conditions and business impact so I can prioritize my
- How do I monitor, isolate, report on, and prioritize fault and performance problems more effectively and efficiently?

### IT MANAGEMENT THAT ENABLES SERVICE ASSURANCE

Rully understand and effectively manage IT service delivery, and, in turn, provide service assurance to the business with the EMOB Solution for Service Assurance:

- Virtual Data Center Visibility
- Configuration Management
- · Identify and Act
